01 / PROFILE

I build customer-facing products end to end, and the building blocks that make the next one cheaper.

Nearly a decade building production software in regulated healthcare, from hands-on application development through technical and engineering leadership. I began in production support, built React provider applications and member login, MFA and billing experiences hands-on, then led the full-stack team behind the member and broker/employer portals. Beyond BCBST, I have shipped customer-facing websites through Marcelle Labs, contributed upstream changes to PostHog and the DataHub MCP server, and developed AI-assisted engineering workflows that add leverage while I keep architectural judgment and verification responsibility.

02 / PRODUCT ENGINEERING

Customer-facing healthcare platforms · regulated production

BlueCross BlueShield of Tennessee

2016 – 2026 Chattanooga, TN

- Across my BCBST career, advanced a progressive move from Java and WebSphere to React, Next.js, TypeScript and Node on OpenShift alongside Sitecore migration work, not a rewrite, using architecture diagrams to make the tradeoffs legible.
- Used a shared Turborepo substrate, theme system, design tokens and environment-driven configuration to deploy one codebase as separate Member and Shared Health portal experiences, protected by unit and visual tests.
- Set up the Storybook environment that became the seam between teams: the public portal team standardized presentational components while Consumer Portals supplied the authenticated services and personalization behind them.

Engineering Team Lead

10/2023 – 03/2026

- Led the full-stack Consumer Portals team, which owned the member and broker/employer portals and the APIs behind them.
- Services the team owned supplied claims, ID-card and enrollment information to those portals and to other enterprise consumers, joining Facets with other enterprise sources.
- Broker and employer experiences the team owned ran on the same portal infrastructure: authenticated book-of-business visibility and credentialing, multi-tenant by requirement.

Engineering & DevOps Strategy Lead

08/2022 – 10/2023

- Developed CI/CD frameworks with Azure DevOps and Argo CD for scalable, secure application deployments.

Application Systems Analyst Specialist / Technical Lead

08/2019 – 08/2022

- Built member-facing portal experiences hands-on: login and MFA flows, billing transparency, routing, portal architecture, and IAM on OAuth and SAML with security teams.

Application Developer / Analyst · Application Developer

08/2016 – 08/2019

- Built provider-facing applications including Contact Preference and Fee Schedule on the team's new React application library, after starting in production support.

03 / EXTERNAL WORK

Upstream contributions, maintainer collaboration and client delivery

PostHog
Upstream open-source contribution · chart interaction — VERIFY ↗

- Chart-interaction contribution approved by a maintainer (PR #88639) and incorporated upstream via a credited, maintainer-created successor (PR #111237), a smaller reimplementation. PR #88639 itself did not merge: fork CI blocked it. Human-directed, agent-assisted.
- Replaced the proposed per-bar flag with an isPointClickable(dataIndex) predicate after adversarial review showed a per-bar gate could disagree with click dispatch.

DataHub MCP server
Merged upstream open-source contribution — VERIFY ↗

- Fixed get_entities dropping a dataset's commit-pinned source link at the MCP boundary (PR #149, approved and merged by a maintainer), with a reproduction and regression tests.

Buildomator
Independently maintained Claude Code plugin — VERIFY ↗

- Authored the original integration of workspace.json, the open spec I steward (PR #6): scoped with the maintainer in a public issue and merged after review. A later fix (PR #15) was closed unmerged because the maintainer cherry-picked it with authorship preserved.
- The maintainer continues to ship and maintain the reader I wrote, and the project README credits the contribution.

Marcelle Labs
Client and early-stage website delivery — VERIFY ↗

- Unity Advanced Healthcare: rebuilt a primary care and mental health practice's brochure site as a CMS-managed patient front door with service pathways, booking and insurance transparency.
- The Poetic Method: moved a healthcare consulting practice from Squarespace to Next.js, absorbing a mid-project repositioning without a change order.
- CRUSOE Agency: handled substantial technical execution, integration and website delivery for the agency's launch site; the founders retained business positioning and strategy.

04 / TECHNICAL FOUNDATION

CAPABILITIES

FULL STACK	TypeScript · React / Next.js · Node.js · REST APIs · Storybook · Turborepo
TESTING	Playwright · Cypress · unit and visual testing
BACKEND / DATA	Java · microservices · SQL · Facets · JSON Schema · Postgres / pgvector
PLATFORM / DELIVERY	Azure DevOps · Tekton · Argo CD · OpenShift · Cloud Run
IDENTITY / SECURITY	CIAM · OAuth · SAML · IAM (Ping, CyberArk) · multi-tenant architecture

EDUCATION

Master's Degree, Organizational Leadership	Saint Joseph's University	2019 – 2024
Bachelor of Science, Computer Science	Southern Adventist University	2009 – 2015
